SYNOPSIS

On

ONLINE VISA APPLICATION PROCESSING SYSTEM

Submitted in the partial fulfilments of the Requirements

For the award of

Master in Computer Application/Bachelor of Computer Application

Online Visa Application Processing System

Online Visa Application Processing System is a web based application written in Asp.Net C# provides an efficient way to handle and process large number of online visa application. The use of Online Visa Application System reduces work load on the employees and admin of the organization. As Online Visa Application Processing System is a web based project; it also facilitate to the applicant. Any applicant can apply for visa online from anywhere and anytime by logging to the Online Visa Application Processing System portal; no need to come personally to the visa office. Online Visa Application Processing project is a complete solution all requirements as of visa data processing.

This is a client server based model. There are three categories of users of this system: Admin, Employee and Visa Applicant. The client of Online Visa Application Processing System project can be any organization who is having many clients from abroad. Such type of organization is frequently sending their employees for their clients in abroad. Our project Online Visa Application Processing System is used to process their visa applications. This is a web based project; it can handle all type of visa applications. It can generate all MIS based report required by the admin and employees which are very useful for decision making. As "Online Visa Application Processing System" is a client server based project, therefore admin is be able to create many no of users under him and the users are called as Executive. Admin will describe the utilities accessed by these Executives under him.

Modules of the Project:

- New Applicant Registration
- Login Form
- Visa Application
